

To make the user interface of this bidding platform for "idrottshall nybro" more user-friendly and streamlined, I'll walk you through some potential improvements and describe what the UI could look like in an ideal setup. Since I can't draw images directly, I'll describe changes and how you could visualize the new layout.

1. Overall Layout and Simplification

Grouping the Buttons: Right now, there are three buttons: "Skicka in offert" (Submit Offer), "Kommunikation" (Communication), and "Följer" (Follow). These buttons could be grouped in a toolbar to save space, and their colors can be made more consistent (i.e., shades of green/blue) to give a more professional feel.

Idea: Add an icon alongside the text to make it easier to understand at a glance what each button does. For instance, a "paper plane" icon for submitting an offer and a "chat bubble" for communication.

Simplify the Sidebar: Instead of having separate areas for buttons, the whole right or left-hand side could be a clean action bar (vertical or horizontal) to give it more visual balance. This leaves the main content area for project information.

2. Header Section (idrottshall nybro)

Make the Project Title Stand Out: Increase the font size and bold the project name "idrottshall nybro" to give it more visual weight. A clear headline will help users quickly identify the project.

Better Use of Tabs: Tabs like "View," "Edit," "Devel" (Development?) should be made clearer. The icons could help here too. Also, the inactive tabs could be minimized or hidden until relevant to prevent information overload.

3. General Info Section (Allmänt)

Reorganize Information:

The information in this section (Sista anbudsdag, Kontaktperson, Publicerad, etc.) is valuable, but right now, it's in a dense format. Instead, breaking it into a two-column layout or a simple table format would make it easier to scan. Key details (like the deadline and contact person) could be highlighted more prominently.

Publicerad: Nej should be styled in a way that conveys its importance (perhaps a warning or colored background to show the project is private).

The status ("Endast inbjudna leverantörer") could also use a different visual style, like a tag system, to make it more noticeable.

4. Description Section (Beskrivning)

Text Formatting:

The description text could use better spacing and perhaps bullets for clarity. Right now, it's a block of text, which can be overwhelming. By breaking the text down into digestible sections, it will improve readability.

The titles like "Omfattning" (Scope) should be bold or a larger font size to differentiate them from the rest of the description.

5. Visual Design Enhancements

Consistent Color Palette: Right now, buttons are green and purple, which is a bit disjointed. Using a consistent color scheme for the entire platform, preferably in line with the company branding, would enhance cohesion. For example, all primary actions could be a shade of blue or green, with secondary actions in a more subdued color.

Responsive Design: Ensure that the interface adjusts well to different screen sizes, with the sidebars collapsing into dropdowns or icons on mobile views, and that all actions can still be easily accessed.

Visualization (Drawing)

To visualize:

Move the buttons into a horizontal toolbar (under the project name), each labeled with both text and icon. For example:

Paper plane icon + "Submit Offer"

Chat bubble icon + "Communication"

Eye icon + "Follow"

Two-column layout for general info (left column) and contact details (right column) in the Allmänt section:

Left column: "Sista anbudsdag," "Publicerad"

Right column: "Kontaktperson," "Företag"

Description:

Keep it in its own section but bold the headings like "Omfattning" and use bullet points for readability.

These changes would simplify navigation and improve clarity. Would you like a more specific illustration of a wireframe using text to visualize this?
